

It's in the Ether

“As a whole being, the human body resonates to a broad spectrum of etheric frequencies. If the human being is healthy, these frequencies are in perfect harmony to one another.”

In this article, we look at the increasing levels of electromagnetic radiation in the atmosphere due to technological innovation, and at what we can do to protect ourselves from it.

The Greek-derived word ‘ether’ is defined as a "hypothetical medium, supposed to fill space, by means of vibrations in which light and other forms of radiation are transmitted". Up until the latter part of the nineteenth century the ‘ether theory’ was an established scientific fact. Then in 1881, two men named Michelson and Morley carried out an experiment, which concluded that there was no earth motion relative to the ether. This experiment discredited the ether theory and caused its rejection in favour of the theory that space is a vacuum and air is merely a chemical composition of oxygen and nitrogen plus other minor constituents.

Today, there is a return amongst many scientists, to some sort of ether theory, whether they call it ether, orgone quantum sea of energy, zero point energy, scalar wave fields or whatever. Here at the Centre for Implosion Research, we believe that the ether is for real, that it is basically dynamic vibratory energy. Dynamic, because it is in motion, and this motion always follows a vortex path.

Scientists such as John Worrel Keely, Nikola Tesla, Victor Schauburger and Wilhelm Reich have shown that etheric energy, although invisible to most, is very real. It is the stuff that enables the perpetual motion of planets, stars and universes. It is the driving force whereby planets are moved within the flow of ether, similar to logs being moved by the flowing water of a river. This explains why there is no relative motion between Earth and ether.

Etheric energy moves in a vortex fashion because the vortex provides least resistance to the flowing motion. It follows that physical matter, which is materialised etheric energy, seeks the same low-resistance motion, and water and air have this intrinsic vortex motion. Our blood and the sap of plants, move in this way too. After all, our veins, arteries and minute blood vessels are not straight channels. They are winding their way through our bodies just like a river winds its way through the countryside.

Everybody has the ability to see the etheric energy field that surrounds matter. We are born with this natural gift. Unfortunately, we have been brought up to focus only on so called “real” material objects; visions of etheric light and colour around people and in nature generally are dismissed as flukes or optical illusions. Through peripheral vision, our eyes are capable of seeing the subtle light and colour emanations of etheric fields. People can train themselves to regain this ability. The human aura or etheric energy field contains numerous energy centres, also known as chakras. Etheric energy is spiralling into these chakras in a vortex fashion, thereby sustaining the aura.

We would like to explain in a little more detail how we think etheric energy works. We have explained that the vortex motion of air, water, sap and blood accumulates etheric energy. Further to this, since etheric energy is essentially a broad spectrum of frequencies, these frequencies, once accumulated, can be transferred onto other objects by way of resonance. The dictionary defines resonance as the “vibrant, amplified effect produced by sound causing sympathetic vibration in surrounding bodies”; i.e. if a radio receiver is tuned into a particular transmitted frequency it will resonate. This phenomenon makes radio transmission possible.

On an etheric level the same phenomenon exists. The elements, out of which our planet and everything on it is composed, all resonate to different etheric frequencies, i.e. they have their own specific eigenfrequency (individual intrinsic frequency). Therefore the energy fields of objects and their colour emanations differ according to their chemical composition. It follows, that the numerous cells, organs and symbiotic organisms within us also resonate to different etheric frequencies. Thus the human aura is a symphonic spectrum composed of many individual eigenfrequencies. This explains the association in ancient Eastern knowledge of certain colours with certain parts of the human body.

As a whole being, the human body resonates to a broad spectrum of etheric frequencies. If the human being is healthy, these frequencies are in perfect harmony to one another. It is like a wonderfully harmonious orchestral sound. Debilitating outside influences, such as disease forming (pathogenic) organisms, resonate to etheric frequencies which are dissonant or disharmonious to our energy field. If these pathogenic organisms become lodged within our bodies, they interfere with and disrupt the harmony of our energy field. Likewise, if one prominent instrument in an orchestra is out of tune with the rest of the players - if it plays off-key-its sound will interfere with and disrupt the otherwise **harmonious** orchestral sound.

So what does modern science think about an energy that pervades space? Well, apart from the quantum energy that every atom contains, there are atmospheric resonance phenomena that have been investigated, called the Schumann Waves or resonances. These are very long waves of extremely low frequency, which are present everywhere in the atmosphere on this planet. The Schumann Waves have been identified as part of the natural electromagnetic radiation, which is particularly important for life on this planet. The human brain actually resonates with these atmospheric waves.

NASA, the American National Aeronautics and Space Administration, has studied these Schumann Waves extensively and recognised the importance of these waves for human health. Space shuttles, leaving our atmosphere, are equipped with artificial Schumann Wave generators to simulate the natural electromagnetic environment of the earth.

One of the Schumann Wave researchers is Dr Phil Callahan from Florida whom we recently met in Germany. He has travelled all over the world measuring these frequencies. What he found was that most prehistoric monuments and church towers, and in particular the round towers of Ireland, act as dielectric

(non-metallic) antennae and amplifiers for Schumann Waves, thus creating an enhanced natural electromagnetic environment within their vicinity. This might explain the special atmosphere in churches and why people experience a feeling of reduced stress and re-invigoration.

The Devisish Round Tower in Ireland

Devenish (daimh-inis, ox island) is an L-shaped island of 70 acres at the southern end of Lower Lough Erne, 1.5 miles downstream from Enniskillen. Ballycassidy is approximately 2 miles north of Devenish Island on the eastern shore of the lake. The ruins of a monastery, two churches, an oratory and one of the finest round towers in Ireland occupy a sloping hillside on the southeast tip of Devenish

Since humanity's artificial electrification of the planet, our atmosphere is not only filled with the natural necessary radiation, but also with unnatural radiation, which has to be considered electromagnetic pollution. This electromagnetic pollution from the communications and broadcasting network, the power lines and all electrical appliances interferes with natural radiation and causes within humans and other living organisms a state of electromagnetic stress.

Everybody has experienced stress in their lives with well known symptoms of headaches, sleeplessness, bad moods, etc. The fact is that these symptoms of stress are general response signals of the body, which can have a multitude of potential damaging causes. Electromagnetic pollution can certainly be one of these causes. When people use mobile phones, they expose themselves to high levels of particularly aggressive types of electromagnetic pollution. This strains the body and it is likely to respond with well known stress symptoms such as headaches. Mobile phone radiation strains the body by interfering with its natural electromagnetic operating system. The list of potential damaging effects is growing steadily as international research progresses. Damage can occur even when stress symptoms have not yet been experienced.

So, unnatural electromagnetic radiation can induce a state of stress within us due to the direct interference

with our own natural electromagnetic system and that of our planet. But what can be done to combat this apart from spending a lot of time around standing stones and other ancient monuments? At the Centre for Implosion Research, we have come to realise that the vortex is the energy transformer and accumulator in nature. It can raise energy from one dimension to a higher vibration and it can restore the natural energy patterns to something that has been polluted. We believe the vortex provides the possibility to transform man-made electromagnetic radiation back into the natural healthy flow of ether.

We have developed the Personal Harmoniser, which contains imploded water and works on the principle of vortex resonance. It protects the wearer from electromagnetic pollution by strengthening the beneficial Schumann resonances in its vicinity and by transforming unnatural electromagnetic radiation back into ether.

About the Centre for Implosion Research

The Centre for Implosion Research was founded in December 1997 by Dolly Knight, MBBS, GCHM and Jonathan Stromberg, BSc, MSc, DIC, FGS.

The Centre's mission is to realise Viktor Schauburger's goals by developing a type of technology that is antithetical to the conventional polluting and exploitative technologies, in that it is pollution free and works in harmony with Nature.
